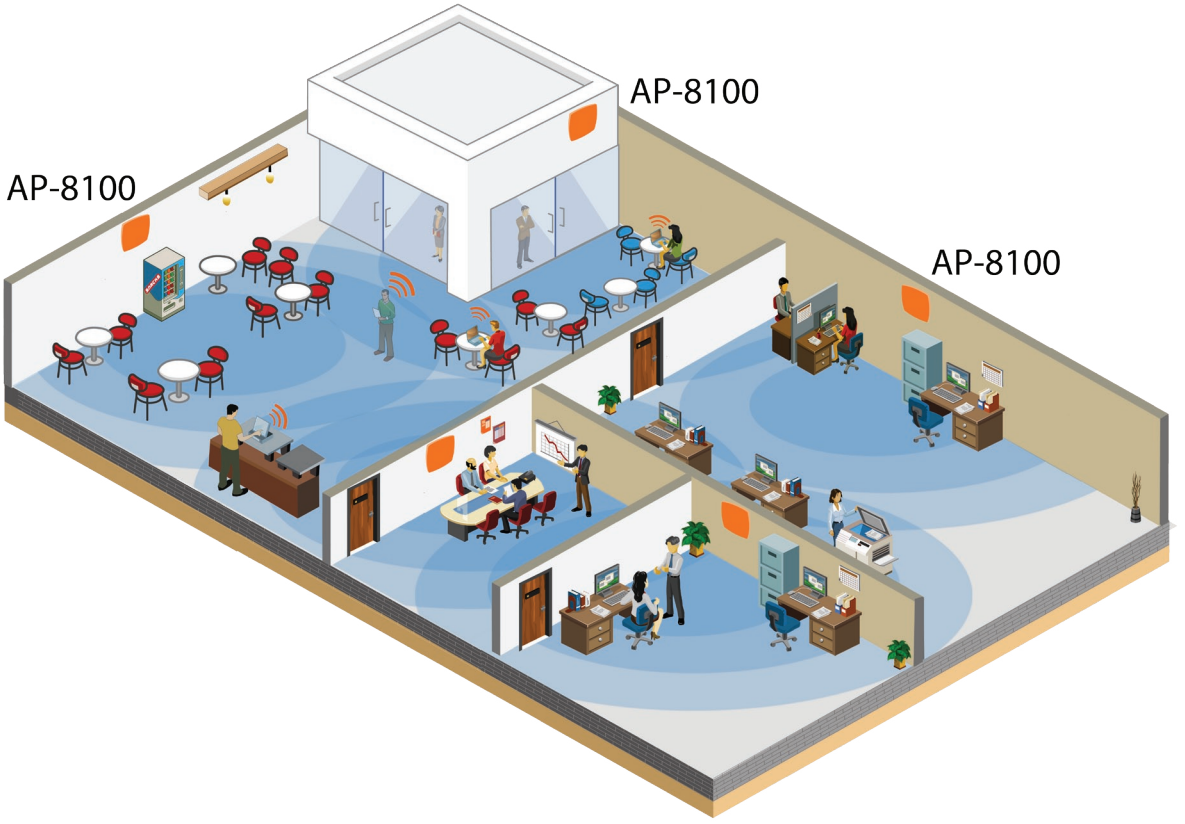
The Solution:

Using Proxim's ORiNOCO® AP-8100 enterprises can now offer Internet access to employees, customers, suppliers and business partners—without sacrificing the integrity of the corporate network. AP-8100 access points create a secure wireless LAN that supports 802.11a/b/g/n and provides additional functionality in public areas such as lobbies, cafeterias and conference rooms. With the Multiple and Single SSID assignment feature a number of groups can be maintained under a single AP network as well as different wireless clients belonging to different service sets (SSIDs) can access the wireless network from one single AP device with a single SSID respectively.

Empowered with the 8100, corporate employees, visitors and other stake holders don't have to worry about changing their computer settings to access the Internet or set up a secure VPN connection to their own corporate networks. Thereby minimizing the need for IT support and providing access to vital data in all types of situations.



About Proxim
