THE MOBILE ENTERPRISE

HYUNDAI MOBIS

Hyundai Mobis Deploys Proxim Wi-Fi to Improve Productivity at 90 Warehouses

Hyundai Mobis, Korea's leading automotive parts manufacturer, wanted to make its workforce more efficient, and improve inventory tracking. To do that, the workforce had to be mobile, able to locate product inventories in the warehouses. Hyundai Mobis turned to technology to solve the problem. Now, the company has successfully deployed a large scale, secure enterprise Wi-Fi network across its 90 warehouses in Korea.

The network, which uses over 1,500 Proxim ORiNOCO Access Points, enables Hyundai Mobis' mobile employees to check inventories in real time, improve planning and benefit from other mobile data applications using Wi-Fi enabled personal digital assistants (PDAs).

"We are already seeing significant productivity improvements from Wi-Fi-enabled mobile warehouse applications at our 90 facilities in Korea," said Young-Jun Kim, Manager, IT department, Hyundai Mobis. "Proxim's enterprise Wi-Fi network solutions combined with Wi-Fi enabled hand-held devices deliver the scalability, security and data rates required to improve our supply chain efficiency and grow our global business."

Korea is a leading market for mobile enterprise solutions and Hyundai Mobis is one of the pioneers in deploying mobile warehouse applications to grow its business and improve productivity. Proxim's Wi-Fi solutions are being deployed across Korea and the Asia-Pacific region to help customers improve their operational efficiency and the productivity of mobile workers.

Based on the success of this implementation, Hyundai Mobis plans future expansion of its enterprise Wi-Fi networks and mobile applications to its offices and facilities overseas.
