What is the 5.2GHz rule all about?

The 5.2GHz band is an important extension to the traditional Wi-Fi bands. It offers a higher data rate and a longer range compared to the 2.4GHz band. This means that businesses can provide a better experience to their customers and employees.

Here are some key benefits:

- 25% more usable spectrum for outdoor enterprise connectivity
- 50% more transmission power compared to the 5.0GHz band
- Longer reach and better coverage
- More bandwidth for higher data rates

How does it benefit Enterprises like yours?

- Improved coverage and connectivity in large indoor spaces
- Enhanced performance for high-mobility applications like video streaming and gaming
- Better coverage in areas with high density

How can you use this spectrum via Proxim?

1. Visit our support website at myproxim.com
2. Download the latest firmware "Tsunami SW v6.06"
3. Update the firmware to your Tsunami® 8000, 8000 wireless radios
4. Choose the new spectrum with 5.150 to 5.250 GHz
