Wireless Video Surveillance Past, Present and Future

Yesterday
Video Surveillance devices were painstakingly connected with expensive wired connections.

Present
Wireless networks are not just replacing traditional wired connections but enabling mobile "on the move" surveillance.

Future
Expect the unexpected with cameras installed in lawnmower beneath parking meters.

How is the near Future looking
To enable all these applications, institutions are relying more and more on wireless based infrastructure.

Wired vs Wireless

- **More Cost**
  - More costs for trenching fiber and wired connections

- **Lesser Cost**
  - 67% cheaper than wired deployments

- **More Time**
  - Wired network connections will take more days to get installed

- **Lesser Time**
  - Wireless Networks get installed in days, not hours

*Based on Research*
